

# Special solution Food & Pharma

Innovation meets hygiene: customised products for your process reliability

## Customised hose systems that meet the highest hygiene and safety standards

Compliant special hose system solutions combine Food hoses for the food and pharmaceutical industries with the appropriate, compliant connection technology - for a perfect combination of functionality and safety.

This is particularly important when abrasive media, powders or liquids are fed through hoses. Connections or clamp connections that do not fit

precisely can lead to uneven transitions, which favour material residues and increase the risk of bacterial contamination.

**OUR SOLUTION: TOTAL FREEDOM FROM DEAD SPACE.**

Smooth, seamless transitions minimise the risk of material build-up, prevent microbiological contamination and ensure safe production.

## Your advantages at a glance

- **Maximum hygiene:** avoidance of material residues and bacteria build-up.
- **Flexibility:** Individual development services or customisations for your specific requirements.
- **Reliability:** Certified materials and compliant fasteners.
- We pay attention to **standards and certifications in Food & Pharma.**

## Our tips for safe production

- Let our **experts advise you** on the right food hoses.
- Ensure that the **components are installed correctly.**
- **Check** the condition of the **tubes and connections regularly.**
- **Clean** the hose lines **before commissioning** and **during operation.**

## Take advantage of our consulting service.

**Do you have special food & pharma requirements? No problem!**

Our key account manager and experts are at your disposal to develop the ideal solution for your processes.
